

A Consumer's Guide To Food Safety

SEVERE STORMS and HURRICANES

U.S. Department of Agriculture
Food Safety and Inspection Service

Food Safety During An Emergency

Did you know that a flood, fire, natural disaster, or the loss of power from high winds, snow, or ice could jeopardize the safety of your food? Knowing how to determine if food is safe and how to

keep food safe will help minimize the potential loss of food and reduce the risk of foodborne illness. This Consumer's Guide will help you make the right decisions for keeping your family safe during an emergency.

Power Outages

We practice basic safe food handling in our daily lives, but obtaining and storing food safely becomes more challenging during a power outage or natural disasters such as hurricanes and floods.

STEPS TO FOLLOW TO PREPARE FOR A POSSIBLE WEATHER EMERGENCY:

Keep an appliance thermometer in the refrigerator and freezer. An appliance thermometer will indicate the temperature in the refrigerator and freezer in case of a power outage and help determine the safety of the food.

- ▶ Make sure the freezer is at 0 °F (Fahrenheit) or below and the refrigerator is at 40 °F or below.
- ▶ Freeze containers of water for ice to help keep food cold in the freezer, refrigerator, or coolers after the power is out.
- ▶ Freeze refrigerated items such as leftovers, milk, and fresh meat and poultry that you may

not need immediately—this helps keep them at a safe temperature longer.

- ▶ Plan ahead and know where dry ice and block ice can be purchased.
- ▶ Store food on shelves that will be safely out of the way of contaminated water in case of flooding.
- ▶ Have coolers on hand to keep refrigerator food cold if the power will be out for more than 4 hours. Purchase or make ice cubes and store in the freezer for use in the refrigerator or in a cooler. Freeze gel packs ahead of time for use in coolers.
- ▶ Group food together in the freezer—this helps the food stay cold longer.

STEPS TO FOLLOW DURING AND AFTER THE WEATHER EMERGENCY:

- ▶ Never taste a food to determine its safety!
- ▶ Keep the refrigerator and freezer doors closed as much as possible to maintain the cold temperature.
- ▶ The refrigerator will keep food safely cold for about 4 hours if it is unopened. A full freezer will hold the temperature for approximately 48 hours (24 hours if it is half full and the door remains closed).
- ▶ Food may be safely refrozen if it still contains ice crystals or is at 40 °F or below.
- ▶ Obtain block ice or dry ice to keep your refrigerator and freezer as cold as possible if the power is going to be out for a prolonged period of time. Fifty pounds of dry ice should

hold an 18-cubic-foot full freezer for 2 days.

- ▶ If the power has been out for several days, then check the temperature of the freezer with an appliance thermometer or food thermometer. If the food still contains ice crystals or is at 40 °F or below, the food is safe.
- ▶ If a thermometer has not been kept in the freezer, then check each package of food to determine its safety. If the food still contains ice crystals, the food is safe.
- ▶ Discard refrigerated perishable food such as meat, poultry, fish, soft cheeses, milk, eggs, leftovers, and deli items after 4 hours without power.
- ▶ Drink only bottled water if flooding has occurred.
- ▶ **When in Doubt, Throw it Out!**

Safety of Food in Containers Exposed to Flood Waters

HOW TO DETERMINE WHAT FOOD TO KEEP OR DISCARD

- ▶ Do not eat any food that may have come into contact with flood water.
- ▶ Discard any food that is not in a waterproof container if there is any chance that it has come into contact with flood water. Food containers that are not waterproof include those with screw-caps, snap lids, pull tops, and crimped caps. Also, discard cardboard juice/milk/baby formula boxes and home canned foods if they have come in contact with flood water, because they cannot be effectively cleaned and sanitized.
- ▶ Inspect canned foods and discard any food in damaged cans. Can damage is shown by swelling, leakage, punctures, holes, fractures, extensive deep

rusting, or crushing/denting severe enough to prevent normal stacking or opening with a manual, wheel-type can opener.

- ▶ Thoroughly wash metal pans, ceramic dishes, and utensils (including can openers) with soap and water, using hot water if available. Rinse and then sanitize them by boiling in clean water or immersing them for 15 minutes in a solution of 1 tablespoon of unscented, liquid chlorine bleach per gallon of drinking water (or the cleanest, clearest water available).
- ▶ Thoroughly wash countertops with soap and water, using hot water if available. Rinse and then sanitize them by applying a solution of 1 tablespoon of unscented, liquid chlorine bleach per gallon of drinking water (or the cleanest, clearest water available). Allow to air-dry.

STEPS TO SALVAGE ALL-METAL CANS AND RETORT POUCHES

► Undamaged, commercially prepared foods in all-metal cans and retort pouches (for example, flexible, shelf-stable juice or seafood pouches) can be saved if you do the following:

- Remove the labels, if they are the removable kind, since they can harbor dirt and bacteria.
- Thoroughly wash the cans or retort pouches with soap and water, using hot water if it is available.
- Brush or wipe away any dirt or silt.
- Rinse the cans or retort pouches with water that is safe for drinking, if available, since dirt or residual soap will reduce the effectiveness of chlorine sanitation.
- Then, sanitize them by immersion in one of the two following ways:
 - » Place in water and allow the water to come to a boil and continue boiling for 2 minutes, or
 - » Place in a freshly made solution consisting of 1 tablespoon of unscented, liquid chlorine bleach per gallon of drinking water (or the cleanest, clearest water available) for 15 minutes.
- Air-dry cans or retort pouches for a minimum of 1 hour before opening or storing.
- If the labels were removable, then re-label your cans or retort pouches, including the expiration date (if available), with a marker.
- Food in reconditioned cans or retort pouches should be used as soon as possible, thereafter.
- Any concentrated baby formula in reconditioned, all-metal containers must be diluted with clean, drinking water.

Food Safety: Removing Odors from Refrigerators and Freezers

Refrigerators and freezers are two of the most important pieces of equipment in the kitchen for keeping food safe. We are instantly reminded of their importance when the power goes off, flooding occurs, or the unit fails, causing food to become unsafe and spoil. The odors that develop when food spoils can be difficult to remove. Use this information to learn how to remove odors from units or how to safely discard an affected unit.

TO REMOVE ODORS FROM REFRIGERATORS AND FREEZERS

If food has spoiled in a refrigerator or freezer and odors from the food remain, they may be difficult to remove. The following procedures may help but may have to be repeated several times.

- Dispose of any spoiled or questionable food.
- Remove shelves, crispers, and ice trays. Wash them thoroughly with hot water and detergent. Then rinse with a sanitizing solution (1 tablespoon unscented, liquid chlorine bleach per gallon of water).
- Wash the interior of the refrigerator, including the door and gasket, with hot water

and baking soda. Rinse with sanitizing solution as above.

- Leave the door open for about 15 minutes to allow free air circulation.

If odor remains, try any or all of the following:

- Wipe inside of unit with equal parts vinegar and water. Vinegar provides acid which destroys mildew.

- Leave the door open and allow to air out for several days.
- Stuff both the refrigerator and freezer with rolled newspapers. Close the door and leave for several days. Remove paper and clean with vinegar and water.
- Sprinkle fresh coffee grounds or baking soda loosely in a large, shallow container in the bottom of the unit.
- Place a cotton swab soaked with vanilla inside the freezer. Close door for 24 hours. Check for odors.
- Use a commercial product available at hardware and housewares stores. Follow the manufacturer's instructions.

IF ODORS REMAIN

If odors cannot be removed, then the refrigerator or freezer may need to be discarded. If you

need to discard the refrigerator or freezer, discard it in a safe manner:

- "Childproof" old refrigerators so children do not get trapped inside. The surest way is to take the door off.
- If the door will not come off, chain and padlock the door permanently and close tightly, or remove or disable the latch completely so the door will no longer lock when closed.

It is unlawful in many jurisdictions to discard old refrigerators without first removing the door.

Depending on where you live, your appliance will be picked up by your solid waste provider, a recycler, a retailer (if you buy a new unit), or program sponsored by local or regional utilities.

Food Safety Questions? Ask Karen!

The FSIS automated response system can provide food safety information 24/7
